

Housing Density

Source: U.S. Bureau of the Census, 2000 Decennial Census. Computations provided by the Weldon Cooper Center for Public Service, University of Virginia.

Definition: This indicator gives housing unit density—number of housing units per square mile of land area.

Limitations: Excludes all group-quartered housing.

Data Detail: This indicator is calculated by dividing the total number of housing units (including both occupied and vacant units) in an area by its land area, measured in square miles. Land area excludes the area of major water bodies, and so in some cases is not the same as total area.

For More Information:

More information on area measurements and housing are available at the U.S. Bureau of the Census website: <http://www.census.gov>.
